Lesbians married heterosexually show higher fecundity—could it be that lesbians being chased into heterosexual relations by the anti-gay inquisition goes hand-in-hand with their husbands, coming from the same climate, namely one that also makes straight guys afraid of being wrongly ferreted out as gay (that being a key purpose of the inquisition) being particularly productive to demonstrate heterosexuality as well as the jungle virility that the religions seek to encourage?

We have finally solved (gay pop. sustainability, based on the passing maternally of the gay gene.) this paradox, says Andrea Camperio-Ciani of the University of Padua.

The same factor that influences sexual orientation in males promotes higher fecundity in females.

The Italian study says lesbians who do have children are genetically inclined to have MANY children. Ironically, this purpose and strategy of the superficial inquisition against gays in the first place (and this is how Vatican scholar Daniel Maguire saw it till his website was shuttered by the Vatican) backfired: it CAUSED THE PROPAGATION OF GAYS IN A RATIO OF 3 LESBIANS PER MALE GAY. SERIOUSLY.

Yes, we really know this:

It only matters that the gay genes only pass maternally, one accounting for 95%. (Natl. Instit. of Health: Science, 7/16/93 and N.Y. Times, 7/16/93, on page 1) NO WONDER psychiatrists considered man-hating mother the prime cause of male

HIGHER FECUNDITY FOUND IN LESBIANS MARRIED HETEROSEXUALLY

homosexuality until discovered/apx. 75% of gay men carry Xq28. Women can get 1 copy of 2, alternately; men, only 1 copy. Hamer's discovery first covered in "Science," 7/16/93, and "N.Y. Times",7/16/93, on page 1, by Natalie Angier, incl.:

"THE LATEST RESULTS INDICATE THAT THE NEWLY REPORTED GENETIC FACTOR IS PASSED THROUGH THE MATERNAL LINE, A CURIOUS TWIST GIVEN THAT IN THE PAST PSYCHIATRY HAS HELD WOMEN AT LEAST PARTLY RESPONSIBLE FOR FOSTERING THEIR SONS' HOMOSEXUALITY." (emphasis added)

THE GENE RESPONSIBLE FOR 95% OF GAYS ONLY PASSES MATERNALLY, AND THE OTHER, RESPONSIBLE FOR ABOUT 5%, ALSO ONLY PASSES MATERNALLY.

"Wall Street Journal," 6/24/05, B1, by Sharon Begley:

http://online.wsj.com/public/article/0,,SB111956911033268215-7vFEzcEM_Wqk5YUEAao48OVb24c_20060623,00
<http://www.newscientist.com/article.ns?id=dn6519>

The genetic doubt caused by the double X's crossing out generality (the gay gene is on the "X," or female, chromosome) is largely erased by the finding some X genes do NOT cancel out (for example, the BRCA's.)

<http://renew.com/general9/worse.htm>>"Rostler/Mundell "Homosexual Sex Exploding With US Women—15 Fold Increase in 10 Years." *Journal of Sex Research*, 2001 37: 333–343

VERIFIES MENDELIAN 3:1 LESBIAN TO GAY MALE RATIO. THIS OUTCOME SURVEY SHOWING 3 LESBIANS PER MALE GAY VERIFIES THE GENETIC PREDICTION AND IN TURN THE GENETIC CONTROL.

In "A Painful Discovery," Carren Strock ("Newsweek" columnist) said there are very many very late self-aware, or simply self-denying, lesbians

"20–20," 2000, ABC–News, "marriage counselors have seen a sudden influx

of middle aged married women with children complaining of "lacking something," "not knowing what it is," and ultimately accepting that they don't want to go further without accepting that they in fact are lesbians.
