It's harder and harder to see how mathematicians missed such simple things about prime numbers.

JSH, you have been spewing this crap out since 1998, when you got your butt kicked on tiny FLT.

and then you cannot even understand the distributive property!

Quote from a JSH previous post;

What makes this story even more dramatic though, especially in terms of the fraud involved, is that posters in fighting against my research are willing to lie about the distributive property—and they get away with it.

I can state the argument simply enough.

The distributive property simply enough says that if you multiply a group you multiply the elements within that group:

$$a*(b + c) = a*b + a*c "$$

Crackpot, Crank, 8 years ??

You like being told you are wrong? Did your mama do that to you ?
