Anyway when will Google
fix the index into a thread?

When in advanced group serch, there is thread and there is
also if you
look for it an index into the thread giving the author and
listed in
threaded manner. You find a reply given by so&so in that
index and open
it. Instead of going to that reply in the thread data, it goes to
the
begining of the thread data file.

Okay; I know what you're talking about now. Yes, that is annoying.

I've already reported it and was ignored.
If it ain't broke don't fix it.

They weren't broke but they fixed it when they went hypercommerical onto
the stock market. Just as I expected, Google began a slide. In fact I've
removed a book mark into google sci.math for it's uselessness. What's it
going to take to get them to fix it?

Re: [] A graph theory terminology challenge

I don't know, but they did, in the past day or two. (I just used it in the past few minutes to find recent replies to my posts, and the links go directly to the individual post.)
