Ah. The order of  $-1$  is 2.  $|\langle -1 \rangle| = 2$ .  $\langle -1 \rangle = \{ -1, 1 \}$ .

How do we know that if  $w^n \equiv -1 \pmod{z}$  that  
 $|\langle -1 \rangle|$  divides  $|\langle w \rangle|$ ?

Since  $\langle -1 \rangle$  is a subgroup of  $\langle w \rangle$ , order of  $-1$  (two) divides  
the order of  $w$ .

Yipee! We're starting to use group theory to explore FLT!
