You haven't
noticed that
Tony is a
crank? And,
that what he
wrote above
is vague
nonsense?

I'd rather be a crank than a
cog, or a stick in the mud,
David.

Then I guess you've got your wish. Tell me:
are you incapable of
learning math or do you choose not to?

I choose not to accept nonsense conclusions justified by
unsound axioms,
if that's what you mean...

Which axioms would those be?

Re: Galileo's Paradox and the Project of the Reals

Take the axiom of infinity, for instance. It declares an infinite "set", but it cannot do so with just the notion of set membership, so it inserts Peano's successor relation as well.

Please state the axiom of infinity that you are discussing.
