I am looking for the best of the Open Source maths packages. I've looked at OSDN Freshmeat and there are hundreds of packages too many to go through.

<http://www.freshmeat.net>

Basically I am reading Roger Penrose's "The road to reality" and want to be able to play with formulae visualizing and doing symbolic manipulation.

Maybe you should have a look at SAGE: Software for Geometry and Algebra Experimentation.
<http://modular.math.washington.edu/sage/>

It comes with Maxima, Pari, Singular, etcetera.
