Why I was born

History has lots of stories of melt-downs by mathematical people and it has long been considered that people who have deep insights into mathematics are often mentally unstable, and likely to suffer tremendous melt-downs and take themselves out.

But no major mathematical discoverer at my level has ever failed.

Not in all of human history, and they didn't understand that I would not allow myself to be the first.

And I am more than capable of changing the entire world if necessary to make certain that mathematics progresses.

After all, that is why I was born in the first place.

James Harris
