B) Get a better random number generator, yours has failed the chi-squared test.

Nothing wrong with the random number generator, it's what happens over 100 seasons with integer arithmetic. The differences are past the decimal point, so everyone is tied, like I said.

I hope you made sure your probabilities were all integers too, just to be consistent.

Python:

```
import random
```

```
outcome = random.randint(0,1) # returns integer 0 or 1
```
