Are you back again, Dumbingo ?

I can't believe that they let loonies like you run around free in Venezuela.

How can an "engineer" believe that complex numbers are "tricks and patches" ?  
Your mental retardation beggars belief.

What is particularly amusing is that you claim that complex numbers are "tricks and patches" yet claim the rational mean method can converge to a complex root via Bernoulli's single dominant zero method.

Have you the slightest idea what you are talking about ?
