Oh oops. That's embarrassing! My proof runs over 3 pages and calls in the big guns to show how one can multiply lots of different primes together without getting the same result.

Would a journal be interested in it for complexity reasons?

Well, perhaps your line of attack can yield other results.

However, it's safe to assume that most simple questions of this kind have been asked before. Many have known answers. Others might be well known unsolved problems. But continue to ask them -- hey, you never know.
