Fair enough, I admit that I have not read all your posts and papers. However, this particularly simple example seems like an excellent way for a lazy person to get to the bottom of what you are talking about. So, if you feel like explaining here in brief and simple terms what you think is wrong with my calculation, or how the scenario that you are envisaging differs from the one I described, then it might lead more quickly to some better understanding. If not then no worries...

----i have given the link. what I want to say is you are lazy.

.
