While the mathematics will probably need to be completely reinvented one day, I don't think that now is the time.

Even if someone does find a legitimate problem now? Although Venkat Reddy doesn't seem like that someone.

You'd just blow it off? Even if it's 100% valid?

How would you know it is 100% valid? Do you realize this stuff has been studied, checked and rechecked for hundreds (not to mention thousands) of years by some of the most brilliant minds of humanity ? Do you really believe it will (or even could) be some day destroyed by one post at sci.math ?
