Not
for
 x
=
 y
=
-3.

-3
is
very
small
for
a
positive
number.

There is
nothing in
the subject
header
about
anything
being
positive.

Come on. It's specified in
the OP's post.

Which was not included in the posting I saw,
since MT_Newswatcher does
not display the entire thread, nor allow easy
access to it.

Anything prior to the line of colons I entered
above for this posting
did not appear on my screen.

Then you should get a real newsreader before making more
comments

Re: $x^y + y^x > 1$

Re: $x^y + y^x > 1$

here, lest this happen again. Thunderbird works just fine, it's free (and yes, in particular it works just fine on Mac OS X.)

David, MTN is a fine newsreader for OS X.

That may very well be – I know nothing about MTN.

But saying it's a fine newsreader seems inconsistent with Virgil's statement "MT_Newswatcher does not display the entire thread, nor allow easy access to it".

Sometimes software goes on the blink, unless you use Windows, in which case it's different.
