But that's not the point; can't Google redirect archived and new "groups" content into another server that is their own? And hire a few moderators. It couldn't be that bad.

Never heard of copyright?

Moving sci.math posts to a purely Google group sounds pretty dubious. In any case, have you seen any sign that Google gives a damn about spam? I haven't.

The overwhelming majority of the spam is coming from their servers, not from outside them, so I just don't see why you expect them to rescue us. Besides, if you use a proper Usenet interface (not a web interface), the spam isn't a big deal.

"We are happy that you agree that customers need to know that Open Source is legal and stable, and we heartily agree with that sentence of your letter. The others don't seem to make as much sense, but we find the dialogue refreshing." -- Linus Torvalds to Darl McBride

Seems like you're a Linux user; me too (Etch). What "Usenet interface" is available? KNode??

Maybe there needs to be an entirely new protocol that has some "error" correction.
