All the main commercial news servers pride themselves on completeness,
i.e. -- they filter nothing. If you want to set up filters on your
end, that's up to you.

Many commercial news servers do filter spam.

And many don't.

Their reason is partly to protect themselves from being sued.

If they filter content, that means they look at content, which means
they can be held liable for illegal content (for example movies,
software, mp3s).

Their defense has always been that they don't look at content.
