DanEsch wrote (in part):

Single-variable in high school, multi-variable in college – the problem of course being that the single-variable stuff wasn't appropriate prep for the multivariable course I did take.

Then I think the best thing for you is to get Spivak's "Calculus" (not his "Calculus on Manifolds", which is much more advanced) and G. H. Hardy's "A Course of Pure Mathematics". If money is an issue, then get Spivak's book.
