some while ago when talking about limits , i used l'hospitals rule or taylor series.

i was then told by certain people that they dont like l'hospitals rule nor taylor series.

they said l'hospitals rule was overrated !

can those people plz explain what is it that makes them opponents of l'hospital rule and taylor series ??

i dont see a downside of l'hospitals rule ?

and i was quite amazed to read that on a mathforum from even relative regular posters.
