what is " $\pi + \pi + \pi \dots + \pi$ (π times)" in your mind ???

π is a term, right?
Answer: $\pi * \pi$.

No.

How many terms are there π ???

Yes.

No.

What are 3.141592 terms ????????

Yes, I see what you mean 3.141592 wzxetrg's are what you say :
 $3.141592 * wzxetrg$

but we don't speak of wzxetrg's but of ***terms*** with the normal meaning of what a ***term*** is.

End Of Discussion.
