I don't read the newsgroup through a browser. That's part of the problem. Not everyone reads the newsgroup through a browser, or through (bleach) MathForum.

I don't quite understand this, but I posted the message to a Maths forum on the internet called "Math Forum". It is located at mathforum.org. If my post has somehow been copied to other forums, and copied incorrectly (all as one line) then I apologise for that.

Compare the SOURCE message, for example, with Google:

<http://groups.google.com/group/sci.math/msg/2ee7aba4bcc8c5d?dmode=source>

Yes, I see that the message all runs as one line there. However, I did not post the message to Google Groups, I posted it to "Math Forum". Obviously someone has copied the message onto this Google site, and copied it incorrectly. As I stated earlier, I can only apologise for this.

Perhaps upgrade to the latest version of IE or

Firefox?

I ->am<- using the latest version of Firefox, son.
Thank you for your
"tip".

Okay, I was only trying to help, there is no need to get angry with me.

Perhaps in future just ignore my messages if they appear on another forum, as someone is obviously copying them across to there, and this is not what I intended.

Re: The quaternion group as a product

However if you like maths then I would really recommend that you try going on Math Forum, it is quite good and they have a lot of maths topics on there. I have never really tried Google or the "newsgroup", so I can't comment on those.

Anyway I am sorry if I offended you.
