However if you like maths then I would really recommend that you try going on Math Forum, it is quite good and they have a lot of maths topics on there. I have never really tried Google or the "newsgroup", so I can't comment on those.

As Arturo indicated, you **are** currently posting to the sci.math USENET newsgroup. You are using Drexel's Math Forum web interface to do this. If you do not understand any of the above terms then investigate what they mean using your preferred internet search engine.

Math Forum is broken. Google groups is just as broken. Ask your ISP or system administrator about USENET and about how you can access it the way it was designed to be accessed. (I.e. not via some web forum interface.)

Phil
