another proposal from dedano:

previously i made a post with main subject (object vs. subject = etics vs. estetics) extending the day and night for one hour when they are of equal length (may and september) i.e. 13hours each with 60min's per hour. it is achievable and that's how dedano honors his younger brother --- the second don of armageddon his transcendent eminency GeOrGy born on 13.06.1978 A.D. now he completes 3 decades of life = 30yoa.

now i have even funnier proposal: how about extending the year too?
currently there are 365.25 days per year (365 are three consequential years and the fourth has 366) and my proposal is to make'em all 369 days per year in honor of my almighty father vase the saver (mesi sine mesi oti si messiah) which will also contribute in reducing the GLOBAL WARMING PROBLEM RAPIDLY. the special thing about this is: if you add 1 at the end of 369 it becomes 3691 while 1963 is the year when skopje (the capitol of |V|acedonia) suffered disastrous earthquake announcing the arrival of dedano and natasha 14 years later in 1977. Vase was born on 15.03.1939 nearly the same time when Hitler became German Nazi Leader. 3 is dedanoes

Re: 369d-per-y

potential and 9
is natashas potential. how do we do it? when the
earth is at negative
apogee we must give earth additional tangential boost
forward (don't
ask for exact sizes; i'll let nasa and esa deal with
it) and when the
earth comes in positive apogee we must add additional
equal tangential
boost forwards regarding the earth's motion in same
spinning direction
as the first tangential boost. may i offer
http://dedanoe.googlepages.com/Armageddon_BOMB.html
or <http://dedanoe.googlepages.com/etg.html> for
booster.

well how about it A, A, A?

www.ukim.edu.mk (might help you understand meeeee)
<http://dedanoe.googlepages.com> (A.rec production)

sure.

369 days.

you have my permission.

but dont forget to change the orbit speed of the earth first.
