

Laplace transform as an algebraic tool

Source: <http://sci.tech-archive.net/Archive/sci.math/2008-06/msg02440.html>

I have used Laplace transforms to obtain algebraic solutions by taking advantage of the "s domain" and partial fractions. This has worked although the equations were polynomials, in the time domain, rather than differential equations.

Does anyone have any experience with doing this? It seems to "work faster."
