You seem to mean by this that you have a last level, the one indexed by w .

LudovicoVan wrote:

I can drop the "informally": A tree with w levels! What is the problem with that?

Nothing at all.

However, you have a huge problem if you are saying there is a level that has index w .

Just one of the many problems this creates for you:
what is the index of the level immediately before level w ?

.
