let there are

10 men and 5 women

if they are standing in a
particular order

say =3DA0 M M W W
=3DA0M M M M W M M
W M M =3D3DZ

Re: Arrange them

have to arrange them in
couples.

like this MW MW MW MW
MW =3DA0MMMMMM
=3D3DX

condition:-
if you reverse the process,
you have to get the given
original order=

Z

Thanks.

no one here,?

do u want any more information ?

really no one knows answer to this
is it so tough for math people.?

oh my God!

Yeah, we're all dumb. No sense in sticking around.

where's the 'toughness' lies ?

Re: Arrange them

Re: Arrange them

First, your exposition of the problem is almost unintelligible. What is it that one is trying to find? What does your "condition" really mean? None of these questions are answerable from what you wrote. Second, you did not even state a problem. What is it you are looking for? An arrangement? An algorithm? A process? No idea. I'll stop at two, though there are several other issues to trying to figure out what it is you were trying to say. Few people will spend large amounts of time trying to figure out what someone else is trying to say, and even fewer when that person thinks that goading is the way to get people to help him.

Do you get people to do you favors in the real world by poking them with a stick, too?

I think it is simple and people good at number theory can do that.

I think you don't know what "number theory" is.
