Just a funny warning here about Zee's behavior.

I

She cross posted a single post in the middle of the thread Efficacy and Safety of statins above to sci.med.laboratory as follows.

Robert wrote:

- > What a burden. I would say that you both need help.

Why do you say that Robert? Of course, she and her husband have seen a doctor. She says right in the post I made that they have. Now she wants to know if others have had atrial fibrillation after taking statins, and if there is possibly a connection. {And yes, heart arrhythmia is listed on the Lipitor PI). Possibly, she also just wants reassurance that she is not going to lose her husband.

What should I tell her Robert?

(So then I responded this way.)

As I mentioned, she needs professional help, clergy, counselors, doctors and family. She doesn't need someone sitting on her e-mails thinking about what to say or do. She does not know you and you are not a personal friend as far as I know.

She is in crisis and needs crisis interventional counseling which you can not provide. You are not there and you don't have any training in that as far as I know.

I would also suggest you seek help for yourself in which you insist on giving out medical advice which is why this lady contacted you in the first place. You can't tell her if any drug caused that or if her husband is going to die or not. They are making medical evaluations and decisions that they will have to make. If the ER doctor or the neurologist need your help then give them your phone number or contact them.

This is also off topic for sci.med.laboratory. for which you cross posted as a way of trolling.

I can't make it any more clearer than that.

(Then the following reply)

- > I'm not qualified to give out medical advice like you do Robert.
- >
- > I'm just a journalist who has done a lot of interviewing and research.
- > Not qualified to give out medical advice like you do. So, I'll give
- > this woman a link to the Lipitor product monograph, where yes, it does
- > say heart irregularities may be associated with Lipitor.
- >
- > I'll tell her statin use caused me rhabdomyolysis, permanent vision

For MEM,MD and others

- > damage, memory loss, transient global amnesia, pancreatitis, gall
- > bladder disease, helicobactor pylori ulcer, muscle and joint pain
- >
- > But no AFIB.

(John responded)

Most of the people on this newsgroup are not qualified to give out medical advice either. We can tell you a lot about lab testing for things like cholesterol etc. You need to ask these questions to a pharmacologist or a cardiac physician.

John Gentile
Editor
Rhode Island Apple Group

(All of the above posts are cross posted to three NG's.)

(This single reply was posted by Zee to Sci.Med.Lab only and Cardiology was left out as she didn't want you guys here see it.)

Robert gives medical advice on sci newsgroups so he must be one of those qualified to do so. I'm sure he wouldn't do it if he wasn't qualified to do so.

The woman who's post I copied here, who had e-mailed me for info, indicated her husband had already seen the appropriate professionals. She just wanted to know what others' experiences of statin adverse effects were. I told her what side effects I'd had and gave her the link for the Lipitor product monograph.

May I have the link to your Rhode Island Apple Group newsletter; or... I love apples. They're my favourite fruit, and my favourite apple is a russet which I rarely see in Western Canada. But tonight I tasted my first Honeycrisp. It was very nice. Very crisp, but light, unlike the crisp but woody gravenstein for example.

:)
Zee

Let's see here ladies and gentlemen. Why did she post the thread to Sci.med.laboratory? What does Sci.Med.Lab posting have to do with what I am posting on Sci.med.cardiology? Why not complain to the people of cardiology what I am posting in cardiology?

I know MEM,MD has already been accused by people here as giving medical advice and he said they are not his patients and he wasn't giving medical advice. I am being accused here of giving out medical advice which comes out of thin air.

For MEM,MD and others

The people in sci.med.laboratory know what I post there because I have been there for years. They have no control over what I post here there or anywhere and I also posted the charter to them just like I posted the charter on cardiology.

She has a few issues and people better watch out.

Don't say I didn't warn you. I appreciate the love and attention Zee and why you feel threatened is beyond me. I have a humble influence in cardiology as my specialty is laboratory medicine.

I want to invite everybody to Sci.med.laboratory if you have any questions pertaining to laboratory work not pertaining to cardiology. We regular posters are all professionals there.

I
