Odd though, in the echo, it shows my right atrium and ventricle are both "Normal" and "Normal size".

Could these ST-T and RAE and RsR abnormalities on the EKG have been a false positive... and could have been brought on by the tachycardia making it appear this way? because as I was having the EKG done, my BPM was 118 at that time, it says. 15 mins later it went up to 154.

however, the echo showed a trace of mitral regurgitation, then it also said the tricuspid regurgitation is physiologic. so I have two things regurgitating here? from my studies and research, tricuspid regurgitation can be a sign of right atrial enlargement as well.. (backing up the EKG's possible findings..)

I remember looking over at the Echo on the screen and seeing the ventricles clearly, and the blue and red coloring flow... but recall the very top being very hard to see. I was also on an odd angle, but I remember trying to see if I could see the aorta or something, out of curiosity (always been fascinated by that stuff).. and really couldn't at all.

It is a rephrasing of the earlier to downplay things.

if it didn't look like anything, why would they have to downplay it?

Your EKG was nonetheless abnormal.

Re: Echo results and a strange question... need some opinions...

Changes we sometimes see in folks with chronic recurrent
subacute
pulmonary embolic events (small clots going to the lung).

what exactly do each of those things i mentioned stand for exactly?

RAE stands for Right Atrial Enlargement.

NSSTW (Delta) stands for Non-Specific ST and T Wave Changes

RSR' in V2 describes a particular appearance of the QRS wave in EKG
lead V2

and how on earth could they have ruled out pulmonary issues and
hypertension if they couldnt even see my pulmonary arteries and trunk?

Your history and physical exam may have lowered their clinical
suspicion for pulmonary emboli.

Actually, those who don't ask questions are the ones that
typically end
up being sorry.

Yeah, apparently my cardiologist seems to see a sin in asking
questions..

Sad to read about your difficulties with your cardiologist.

thanks again.

You are welcome :-)

Prayerfully in Christ's amazing love,

Andrew <><

As for knowing who are the very elect, these you will know by the unconditional love they have for everyone including their enemies (Matthew 5:44–45, 1 Corinthians 13:3, James 2:14–17).
