Does anyone have any idea where Pfizer is at with regard to the following?

"ETC-216 is an investigational drug is actually a synthetic form of HDL cholesterol. I saw this in a 11/30/06 Forbes article:

"Another drug that has been delayed because of manufacturing issues is ETC-216, an injected compound to clear plaque from arteries; it could enter large scale trials within a year, Pfizer said."

That's about all it says but here's the article if you'd like to see: <http://www.forbes.com/business/2006/11/30/pfizer-drug-pipeline-biz-cz...>
