Sounds as though your dentist should be able to advise you as to **why** your symptoms could be treated effectively with an NTI. There are never any guarantees in medicine but some treatment options carry less risk and better outcomes than others. You need to expect to find a dentist capable of explaining this to you. Otherwise, you could find yourself in the hands of a surgeon for absolutely no good reason ... that is, without medical necessity.

Thank you for further explanation,
The Webby
