Dr. Steve,

How is a CEREC or a Cad-Cam milled all ceramic restoration kinder to the tooth than gold?

Flap

<http://flapsblog.com>

Non-glazed (but polished) porcelain is almost equal in wear characteristics to enamel.

Closer to enamel in wear characteristics and in thermal expansion-contraction than gold.

Re: Gold or porcelain onlays

Really? I'm not doubting you, just that I'd always understood that no dental material was closer to tooth structure in wear and cfe than gold.
