My software requires they enter a unique password to clock-in. The manual clearly states that sharing passwords for any purpose is grounds for immediate dismissal.

Do I need to tell you foolish that is? She could simply divert deposits to her account. You would not have any trail to follow. She could open a bank account with your business name on it. She then deposits whatever she wants to her own account, you have no paper trail. She could do direct withdrawals from your account to hers, and throw out the slips. Many ways she can cheat you. Only the owner of the practice should be allowed to open any mail. This needs to be in the procedure manual. You open the mail, stamp your deposit endorsement on all the checks, keep track of the total amount, and verify it against the daily deposit. Staff should only see the mail after you have opened first.

Who's to say they don't punch in or out for each other???? I much prefer the old system we had in the down town Kombat area: They get the schedule plus one half hour each side for set up and take down. There is no ambiguity there.
