The Twist disposable propy angles are completely different from all other propy angles. All other propy angles are rotary, that is, they spin 360 degrees. That creates frictional heat of 155 degrees to 175 degrees within just 3 seconds. That's why hygienists and dentists have to lift and dab thier propy angles, so that the patient doesn't feel the heat through the tooth.

Instead of rotating, The Twist oscillates, back and forth, 90 degrees. That's the same action used by most of the power toothbrushes, like Oral-B and Crest. Because of it's unique action, The Twist does not heat up, or spatter paste, blood, saliva or debris since there is no centrifugal force. That means the patient and hygienist remain clean.

If you would like to evaluate The Twist and receive a free sample please call or email
