SP,

I know you did not ask me, but I am speaking on this too if you will

Re: Sue's campaign of misinformation

listen, please.

I was not trying to quote Boyd. I prefaced my post with a huge "THEORY ONLY."

I put quotes around "parafunctional overuse" to indicate that this was my own colloquialism for what is happening when a person bruxes... but I then followed that with "(as Boyd describes)."

Tim called me on it.

I saw my mistake, explained and corrected myself. Yet Tim made up his own mind as to my intentions. Now he and Webby seem to think I am from the TMJ Association or something. It is ridiculous!

Yet. I also incorrectly described the "chewing reflex" as a response to ANS activation...namely the parasympathic causes relfex inhibition of the of teh muscles of mastication.

BIG mistake. Dumb assumption on my part. But I was NOT stating as fact. I was only stating as THEORY (in attempt to discuss and learn).

Anyway, that set off Whamatus.

I have since reviewed my physiology and understand the 5th cranial nerve (trigeminal) is both sensory/motor. However stimulation of the hypothalamus, amygdala and even the cerebral cortex in areas near taste sense can cause chewing.

So I am confused about the potential role of ANS in TMJ syndrome, as well as night time bruxing. Is there a potential role?

I can direct you to the thread.

Thanks,
-Sue
