Bill Wrote:

And how many patients are so dentally educated to know whether they are getting "switched" to a more expensive procedure? Bill – could you give some concrete examples?

I don't quite understand if you mean getting switched to an unnecessary procedure, or if you mean, for example, suggesting better materials which would cost more? As in, could being "switched" be in the patient's interests? Cheers (and sorry if this is a dumb question).
