Hi,

I was curious what keeps you personally interested in your job after years of doing it?

I'm helping a relative prepare for his dental school interview and the question came up.

Many thanks for your help!

It's an ever-changing job! So much new information, techniques and materials are released every passing year, it could keep a dentist interested forever. As the years pass and you gain more experience, you are able to tackle on more complicated cases and the challenge keeps you interested.
