The free sample consisted of 5 stock NTIs. I made one for myself (lining it with Triad gel, instead of SNAP...I got it done, but it wasn't easy). I melted one with the SNAP liquid (not paying adequate attention to the instructions, and being afraid the acrylic might not bond well enough without a primer coat).

Steven,

Do you still use the SNAP? One of the local dentists here said he's using those thermoplastic buttons (by Advantage Dental) to reline the stock appliance.
