"Cardiac Arrest" dies not rule out crohns disease. That can also, like everything else, be a result of crohns, just as the boy that dies on the athletic field can drop from a heart attack with no history of heart problems. That is why I continue to say anti-depressants must be banned, nothing we can do about the hard drugs Anti-depressants permeate our society for the last fifty years since the pharms found the formula. and it is next to impossible a nut to crack. I am not writing here as off topic because it is not off topic anywhere that concerns the health of a person. Nor do I expect you all to agree with me because of the elusive subject it is. Basically, I say it to anyone in any way concerned or should be concerned, physician, pharm, administrators of institutions, or the man next door. I have a difficult time retaining a physician as you can guess what they think. But maybe. somewhere, sometime, it will hit the mark for the concern and action it requires. No one is doing it deliberately, just ignorantly. I am not at liberty to discuss or disclose a situation that may prove the truth of it.

Well, another subject? As to tinnitus, (which can be a manifestation of crohns) My experience is that Malt Barley in its original form from the health store (if anyone can stomach it) can ease the tinnitus somewhat. Or Brownberry bread's new addition of whole grain bread has some Malt Barley in it as Lindt's chocolate truffles has it also (after wheat flour, all items). The truffles seem to give the most relief (none are great) but better than nothing. The banning of anti-depressants and curbing stimulant drug use will curb it also or even negate it maybe? That's my spiel for today and everyday has a slightly different sound, but all of it is all stimulants can be deadly by a mind/body connection maybe my mind and body don't connect too well, therefore the repetition.

Sincerely
Gail

I just looked it up. It was a female principal in Chicago. She was under 'some type of sedation' during the procedure and went

Re: Any Question Too Strange?

into cardiac arrest.

I would say it isn't likely to be related to the dental treatment itself, but rather the sedation.

:-(

D

Foolish question? Foolish person? An obsessed person?

Any answers would be welcome.

Thank You

Gail

I'm sure there will be an autopsy. Dentistry is stressful. I just got my basic life support course last night at our dental study group. It could be an allergic reaction to anesthetic, but it's hard to think of anything else remotely that could happen directly from the procedure.
