The National Cancer Institute (NCI) is currently sponsoring three phase II

sci.med.diseases.cancer: Re: Microwave Therapy ... what do you reckon Steph and others?

clinical trials using whole-body heat therapy in combination with chemotherapy drugs in treating patients with advanced melanoma, advanced sarcoma, and metastatic and recurring lymphoma."

<http://www.clinicaltrials.gov/ct/gui/show/NCT00003135>

(don't know where the other 2 are) but this one seems to say Phase II

<http://cancer.duke.edu/hyperthermia/research.asp>

<http://www.vci.org/inflamma.htm>

These preliminary results show that thermoradiotherapy should be considered as a treatment modality for inflammatory breast cancer."
