Now you are thinking.

Cures don't make money because they end the disease.

No diseases, no multi BILLION dollar pharmaceutical companies.

Duh.

Many things can help the body cure itself.

Rife killed over 80 pathogens in the body with his frequency generator.

The City of San Diego was planning to erect towers and saturate the town with multiple full range frequencies but somebody with big money queered the deal.

The Rockefeller drug companies won. Everyone else lost.

Put "Royal Raymond Rife" in a search engine and read.

Find and go to the sites of Rife Researchers.
