The reason that a cure for cancer has not arrived is SABOTAGE. The billions of Dollars that people pay into cancer research funds are embezzled for war purposes.

Already in the nineteen sixties, two doctors, Cutler and Morton, were experimenting with something quite bizarre. They were TRANSPLANTING cancers from one patient to another. This was at the same time as the famous heart transplants of Dr. Christiaan Barnard.

Barnard's patients died of the rejection of the transplant. It was also noted at that time that when the veins of a rejected heart were inflamed, sometimes the natural veins of the patient were inflamed in sympathy. This was dubbed the "Homograft Reaction". Cutler and Morton hoped to harness this reaction.

Sometimes it worked. A transplanted tumour would be rejected, and the original was rejected as well. Then, when Cutler and Morton tried it again, it failed, failed failed – and as they were about to give up, suddenly worked again.

The homograft reaction is too uncertain a method to be of use. However, the cure for cancer is without doubt ANTIBODIES.

Every cancer has altered DNA. This may have been altered by a retro–virus which puts added DNA into the cell. Papilloma, polyoma and Epstein–Barr are examples. The DNA may have been altered by chemicals – which therefore tend to affect the integument (surface), producing carcinoma. The DNA may have been altered by radiation, in which case the tumours will be deep below the skin (sarcoma). Even friction can, on rare occasions, cause cancer.

DNA codes for protein. So every class of cancer has its own kind of protein. Indeed, it is usually this protein itself that is the cause of the derailed cellular metabolism.

The immune system codes mainly for protein. Witness, for example, the phenomenon of insulin antagonism. Diabetics on bovine or porcine insulin might develop an immunity, when their bodies created antibodies against the bovine or porcine ligand of the protein. To

The CURE

avoid such problems, scientists made an exact copy of human insulin. Insulin is two strands of protein joined by zinc atoms. So insulin antibodies are antibodies to a protein.

My own mother was "treated" by evil fake doctors, with a massive overdose of chemotherapy. She died in agony over a period of ten days. Since that time – in 1962 – I have been researching cancer. It became clear that she had not had cancer. Indeed, by 1996 I was sure that I had found the cure. I appeared on television to announce it, but was very guarded to avoid sabotage.

In the meantime, Dr. Donald L Morton introduced the BCG cure for bladder cancer. It has a "yield" (success rate) of 70 to 80 percent. BCG vaccine is put into the empty bladder. This is repeated once a week for six weeks.

I recognised that it is moist in the bladder. Old-style (aqueous) tuberculin was soaking out of the BCG and into the "fronds" of cancer. So one can cure bladder cancer with old-style tuberculin alone. This saves the inconvenience of trying to keep the whole bacterium alive. Tuberculin can be saved for months in a refrigerator, and is portable.

Anything that leaves an immunity behind is a cure. It might be a low-yield cure like the homograft method, or a high-yield cure like Morton's BCG.

Other things, like dichloroacetate, or other chemotherapies, like surgery, like radiotherapy, cannot be called cures. They are treatments.

If, however, cells have been killed by chemotherapy and the immune system makes antibodies whilst clearing them away, then a cure is taking place.

Similarly, surgery may prolong life long enough to allow the immune system to "find" the cancer.

PROPER doctors should be allowed to make their own INFORMED decisions as to what to recommend. Unfortunately, there are many, many fiendish people out there, imitating the medical profession.

The following is part of a previous conversation, with more details of the cure at the end.

On 9 Jul., 14:39, "All Seeing Eye" <spamEYEt...@xxxxxxxxxxxxxxxx> wrote:

NOTE:

Christians should pray for Masons without judging them. Bring their

The CURE

sins to God in an attitude of love, petitioning the Father for His mercy, binding in the name of Jesus Christ the spirits of deception, antichrist, witchcraft and death. Most men have no perception of the spiritual deception they have entered.

Please remember that 'We do not wrestle against flesh and blood (your loved ones) but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places,' (Ephesians 6:12)

Freemasons blackmail each other into committing worse and worse crimes. Then, when the "criminal record" is adequately enormous, they blackmail each other into committing their crimes UNPAID.

Each crime is numbered by DEGREE. They "learn" to overcome each inhibition by degrees. They "learn" to commit such horrendous crimes that they would be sick at the thought of such things at the beginning of their Masonic "career". So they keep the true horror hidden from each other until they have been "educated" to the higher degrees.

At the highest level, they are so in awe of the Brotherhood that they dare not disobey their masters – their Master Masons. So when they are told to leave all their money in the bank for the war chest, they obey. They have become terrorist slaves.

At that highest level they "learn" that the devil is God. They "learn" that their only pleasure in life is to serve the devil.

Albert Pike, in his book "Morals and Dogma" of 1872 wrote that Lucifer is God. The chosen name for the Masonic devil God varies from branch to branch. There are many branches. The first Pope to condemn Freemasonry was Clement 12th in 1738. He called them "depraved and perverted". There were in all EIGHT Papal encyclicals against the Masons.

Masons are always falling out with each other, and creating splinter groups like al Qua'ida of the World Trade Center. This group (Arabic "The Group") were the Saudi branch of American Masons until they broke away and struck back.

MEDICINE.

Medicine is, according to Masons, evil. Terrorist Masons are installed as doctors with fake degrees.

There was Harold Frederick Shipman (killed 862 people with heroin). He had been, in Masonic parlance, an "Invisible Student" at Leeds University. Real students will not have seen him, which "proves" that he was an Invisible Student.

The CURE

There were "Drs" Ledward ("gynaecologist"), Walton ("general practitioner"), and Allison ("psychiatrist") who raped patients about twice a week for thirty years. Fake lawyers and fake police ignored these 12,000 rapes – because such crimes serve the "Devil", and serve the purposes of Freemasonry. Ashamed of their crimes, and afraid of punishment, they leave their doctors' salaries in the bank to be collected for the war chest.

In America, there was Reinaldo Sylvestri, the fake plastic surgeon, who obeyed his master by putting FEMALE breast implants into Mr. Mexico.

He fled to Belize, but the British collected him and handed him back to American Masons in Miami in exchange for runaways from British Masonry.

IMMUNOLOGY

In 1796, Edward Jenner discovered that Vaccinia would make people immune to Variola, the smallpox. Immediately, the Masons – in the service of their devil–God – published every kind of ridicule of Edward Jenner, including cartoons of people growing udders and horns after being treated by him. They even mixed lethal smallpox with his serum to try to kill his patients and blame him.

Jenner had to publish abroad. He became famous abroad. Even Napoleon was impressed, saying "I can refuse NOTHING to that name" – to the name of EDWARD JENNER.

To this day, there are pages on the Internet where Jenner is accused – FALSELY, OF COURSE – of believing in "Horse Grease", of having STOLEN the idea from a Mason, of being a spiteful person and so on. There was/ is also a page on the Internet which says "Brother Edward" was a good man – and pretends that all Masons are good like him.

CANCER CURE

Those who need it – GUARD THESE WORDS. The Masons will attack this.

CANCER ANTIBODIES cure cancer. Here is how to get them.

You get a marker, which might be old–style tuberculin, new–style tuberculin or a mixture. Old–style is water–soluble. New–style is alcohol soluble, and lingers longer in the tissue that has been marked. New–style, in other words, does not wash away.

You ensure that the person reacts to that marker. In the case of tuberculin, you VACCINATE a person against TB, using BCG vaccine. You can test the immunity by means of the standard "Tuberculin Tine Test" that uses old–style tuberculin.

The CURE

When the immunity is ready, you put a single cubic centimetre of tuberculin in a syringe with a long needle. You clean the outside of the needle, and perhaps draw a trace of isotonic saline into the needle. That way, neither the inside nor outside of the needle is irritant to the patient.

Using palpation, or ultrasound, or x-rays, you guide the needle into the heart of a tumour or its metastasis.

You press the plunger now, very slowly and steadily. The aim is to mark the tumour from the inside outwards, without causing inflammation of healthy tissue.

As you withdraw the needle, the flesh will wipe the needle-tip clean. So the minimum of healthy tissue will be marked.

The tuberculin marker in a tuberculin-positive patient will summon the immune system of the patient. This starts off the recovery process.

What is going on is that the T-cells are detecting the marked tumour and digesting it – like miniature surgeons. They carry the tissue to the lymph nodes, where the B-cells make antibodies against foreign protein. Eventually, the immune system will produce enough antibodies that ALL the tumours and metastases become inflamed. Treatment can then stop.

The inflammation of the tumours is a sign that there are cancer antibodies, and that therefore the T-cells are at work. Immunity continues even after the tumours have gone. Sometimes a single cancer gene is found to "code" for as many as four different kinds of cancer. So the patient becomes immune to all immunologically-related tumours, but not to others.

ADDED DETAIL:

It has been usual to describe cancers by their appearance. However, liver cancer looks like liver cells, and lung cancer looks like lung cells. But both may have the same mutant gene.

Here is an example of a gene that "codes" for FOUR types of cancer:
http://www.world-science.net/othernews/070704_akt.htm

There is a need for a new style of oncological codex, based upon the immunological properties of the cells.

END OF ADDED DETAIL

If the immune system is not triggered at the first treatment, the treatment can be repeated once a week for six weeks.

Charles Douglas Wehner
