Easy answer:

NONE.

It was a movie. All death was simulated. Most of the "vietnamese" soldiers probably weren't even Viet Nameese.

Another math question: How many bullets does it take to kill the hero in any movie or tv show? (remember Miami Vice—the bad guys would shoot thousands of bullets at Crockett and Tubbs and never even graze them—on average twenty to fifty guys armed with automatic weapons couldn't kill the two cops armed with handguns.

So the answer is: INFIINTE It takes infinite bullets and they still don't kill the heros

.
