Chuck, i appreciate your info and will keep it in mind. But i also must believe that there is a small chance that i CAN get it through sex or other means. Since there are so MANY unsolved cases from people who contracted lyme disease from a family member or loved one close to them. I know this first hand. I live in Jersey/Pa area. A hotspot for lyme disease. And i know ALOT of people who have the disease where the first member of the family got lyme disease from a tick bite, and the rest of the family members got the disease also but never had a rash or tick bite. I even read a article about a year ago about the possibility of lyme disease spreading through the air. Not many sources seemed to back this up though.

I appreciate the government resource you provided. But we all know how those sources could be sometimes. They need a TON of evidence on everything in order to accept the truth. Kind of like the same situation thats going on in Aruba right now with that missing girl. If theres no body, theres no case. But we all know it had to be one of those 3 guys. or all of them.

I feel bad for all you sufferers out there. My mom had lyme disease undiagnosed for like 15 years. She was a total mess during that time mentally and physically. she didnt even know who she was. she's much better now though. She was in the hospital here in the U.S. for months and it barely did anything to help her. Then we took her to Hungary (where we are from) and they cured her. Im not kidding. She is totally back to normal now physically and mentally and hasnt tested positive for lyme for over 10 years. She had this treatment done where they ran her blood through this machine and heated up the blood to a high temperature, and then returned it back into her body. and they did this a few times. And that is what got it out of her system completely. Its kind of like Dialysis i guess but different. I dont believe they heat the blood up during dialysis do they? But anyway, i wish all of you could look into this type of treatment. As our crooked country here in the U.S. is only looking for temporary fixes, not cures. Anti-biotics over and over again.. that was useless for my mom.

Re: is lyme disease sexually transmitted?

it didnt do anything for her.

Mike
