It was a procedure that heated up the blood to a high temperature.. It had nothing to do with Hydrogen pyroxide or ultra violet light.. It was done in Hungary. They use different procedures there and it probably isnt even published because they dont use this in the U.S. I wish I knew the exact procedure name but I dont. This procedure was done only about 2 to 3 times and that was all that was needed.

Yes.

You don't seem to know what this even was or involved...but know that they know better in "Hungary". That's helpful.

The HT in ICHT stands for "hytperthermia". If that's what your Mom had done, she's lucky to be alive.

The guy that was promoting it was charged with aggravated voluntary manslaughter by the Italians, and last I heard, he was under indictment from the Feds in Florida for Securities fraud.

And I visit these forums very infrequently.. Maybe twice a year. This is why I said last 3 years. Its a horrible illness and I'd rather not even be reminded of it. I just occasionally like to hear of new stuff.(like when i heard that Lyme could be spread through the air in close quarters) , or sometimes I just post stuff that may help.

Yes.

So by visiting twice a year, you know all about what the problems are here.

You are just full of information, help and insight.

Thanks.
