Bart you are in asterisks because I am composing in Word. It took me until lunch to get here today...I actually had to work at work...go figure.

\*\*\*\*\*All in all though, mixed motives or not, at least they're acting

altruistically in part. Which is more than one can say about many people\*\*\*\*\*

I have no problem helping others what so ever even when I don't get something in return. However, if and when there is an added bonus, I don't see anything wrong with that. There are very few true win-win situations in life. I say, if one happens to be so lucky, go for it. I don't think, however, that a study is always going to be one of those situations. The problem with studies, IMHO, is that they are always up for interpretation. And several versions of interpretations, in fact.

I wasn't on the Lyme scene long when the last Fallon study was published. The way I interpreted the results and my opinions vary enormously from many of the folks over at LN USA.

\*\*\*\*\*BUT here's the downside: I pay through the nose for the insurance,

like \$800 a month. And don't get it through my employer (used to but now am self employed but kept the same insurance).\*\*\*\*\*

You know what? My insurance was better when I had to kick in towards the higher premium. I didn't mind so much doing that because I had great coverage. However, it became so expensive that my job went with this plan because the paycheck deductions were going to be so high people were looking for other employment. We are a small corporation, less than 50 people.

\*\*\*\*\*I will say though I haven't used it like when I was sickest (ran up somewhere near \$750 k in medicals\*) my prescriptions are expensive and

I know there will come a time that I will need it again big time though maybe not from Lyme\*\*\*\*\*

The problem is
