People are such fools it is sickening. These corporations control medical research to increase their profit by promoting their toxic fake foods while covering up their dangers and demonizing healthy non profitable foods. Anyone who does not comprehend or accept these simple facts are either ignorant fools or dupes. Anyone who does not believe that people would poison an entire population for profit simply do not understand human nature and have no understanding of the facts and of the behavior of such industries and corporations throughout history. All one has to do is investigate the facts and examine the history of the corporate world. We are talking about immorality and evil of the highest order. The same evil that collaborated with Nazi Germany up to and even DURING world war 2. Several hundred immoral US corporations like Ford and General Motors had dealings with Germany including the grand father of our freakin president. His family fortune was made by arming Hitler and exploiting slave labor. This is the man running the United States. There is NO LIMIT to what these corporate villains will do to satisfy their greed. They are in positions of immense power all the way up to president of the USA. They count on the disbelief and gullibility of the masses to operate unopposed. Does anyone really think people who were more than willing to collaborate with Hitler for profit would not be willing to do something as simple as poison the public and cover it up? They are able to do this easily with the amount of control they have over our society through government and media. They have done a wonderful job of covering up their evil behavior during world war 2 and beyond by keeping their corruption out of the media. Why do you think almost no Americans know about these things. Where do you think the TV networks and news media get their money? The same place the medical research establishment does. Do you think they are going to educate the public about the unimaginable evil and corruption of so many American corporations? 99% of Americans probably hold the delusional idea that Ford and General Motors are wholesome American companies and that the Bush family are godly moral people. This is the brain washing of the masses. These are the lies and cover up of reality successfully dispensed upon an entire population. This country is in the hands and under the control of an elite immoral and evil few with immense wealth and power. That is the simple truth and it is the unwillingness of the ignorant uncaring public that allows them to remain in power and continue poisoning killing and controlling the masses. This is accomplished easily with there near complete control over the government and its many agencies as well as the few major media outlets to dispense their lies and propaganda to the public.

Re: Can we trust science research?

sci.med.nutrition: Re: Can we trust science research?

It comes down to this, the fabrication and manipulation of medical research and the widespread lies and deception about health and food pales in comparison to other, even more sinister actions taken by multi billion dollar industries and corporations for the single goal of increasing profit. People just need to wake up.
