Nikola Tesla

SO true. Sadly, the "betterment of humanity" has been interpreted by some as the increased acquisition of wealth for CEOs and stockholders and turning medical journals, hospital, universities and governments in tools of the marketing of drugs, regardless of their efficacy or putative superiority to extant therapies.

That's the distortion that Tesla railed against.

And it is murdering millions of people, globally, every single day.

George M. Carter

More than 70% of scientific research is funded by industry. What do you think is the likelihood of their primary or even secondary goals being 1) the betterment of humanity or 2) simply to line their own pockets in any way they can?

Kinda puts the activities of the food industry, the pharmaceutical industry and the medical industry into perspective.
