The prostatitis patients consults

Answer for the prostatitis patients consults
excerption

1. What is the different between prostatitis without bacteria infection and prostatitis with bacteria infection?

The prostatitis with bacteria infection usually cause by the bacteria infected urethra, then the bacteria go up to infect bladder, prostate, testis, seminal vesicle, epididymis, etc urinary organs. Such as bladder is bloated and ache (underbelly is bloated and ache), urethra itchy, testis and prostate bloated and ache symptom. There are some patients' prostatitis is caused by a certain organ serious infection (such as skin, tonsil, ear, intestines, stomach or kidney infection), this infection invade the blood by small pus embolus, then through infection bacteremia or through lymph system spread to prostate.

Usually after 7 days of urethritis beginning, the bacteria can infect to prostate. If the infection is longer than two months, it is subacute. If the infection is longer than 3 months, it is chronic. If you had been chronic of the whole urinary organs infection, you needn't use antibiotic anymore. In the acute infection period, you can both use chinese herb medicine and sensitive antibiotic to cure completely without stopping, most of case can be recovered. But if you had been chronic, the bacteria had invaded to skin under the mucosa, invaded into prostate hidden obstinately, so it will bring more difficult for treatment.

The prostatitis without bacteria infection is caused by the prostate hyperaemia excessively. Such as driver occupational disease, the seat bump to constrict prostate. When you sex excessively and bear not to drain sperm, eating too much pungent and hot food or drinking too much lead to damp and hot drop to bladder. In these cause, there are not bacteria infection in prostate, so it is called prostatitis without bacteria infection, it is easy to cure. Chinese medicine treatment is the best selection, improve the blood circulation and break up the block, cooperate practising QiGong to promote the blood circulation, dredge the main and collateral channels, repair the

prostatitis patient consult

damage prostate tissue. The prostate rehabilitator can stimulate the prostate micro– blood circulation too. Such as when you feel prostate pain, only need to use the rehabilitator for 30 minutes, the pain will release or disappear. The bee products provide the nutrition for prostate recover and enhance the resistance and energy.

Judging whether prostatitis with bacteria infection or without bacteria infection, main depend on whether the urethra, bladder, testis have infection symptom. If you have, it must be prostatitis with bacteria infection. Beside bacteria , the others micro–organism infection(Mycoplasma, chlamydia, fungus, trichomonad, ect) are also belong to prostatitis with bacteria infection.

2. If you can't be tested out bacteria in your prostate liquid or urine, can it be said that you have recovered?

The prostatitis with bacteria infection must accompany the whole urinary organs infection. After it had been chronic, the human body's resistency will be stronger and adapt to the bacteria. All the living thing can adapt each other, so the symptom of chronic is much alleviated than symptom of acute. If you persevere in treatment, you will even feel no symptom. This is in a stalemate, neither human being nor the bacteria can win completely. If the bacteria consistency can't achieve enough high to be tested, the doctor can't find bacteria in your prostate secretion. But if you eat the hot food or had a cold, the body's resistance will be weaken, so the symptoms will be clearer, perhaps you will be tested out bacteria now. So if you want to judge whether you had recovered totally, not only need to judge by the test, but also need to judge by the symptom. After you had recovered, you need to stop eating the inappropriate food for 3 months.

3. Why the prostatitis disease is the unsolve medical problem in the world?

The prostatitis is really an unsolve medical problem in the world. Not only in China, but also in the USA and European country, all the doctors are headache for it. There are more than 180 foreign country prostatitis patients have used my green therapy.(Such as USA, German, Canada, England, Indian, HongKong, Singapore, Norway, Austria, Nigerian, Malaysia, Australia, Nepal, South korea and so on). They all get good effectiveness, most of them had totally recovered, the others are in treatment now. In china, there are chinese patients buy the medicine and use my green therapy to cure prostatitis every day. If they obey my requirement of stopping eating the improper foods and insist practising Qigong, they all can be recovered. About 2300 chinese patients had recovered by my method in the past three years.

If the prostatitis can't be recover for long time, it will cause sterility, hyperplasia and calcification. The prostate cancer occur rate is high in USA and European country. Why prostatitis is so difficulty to cure? I think the there are follow cause : (1) At first,

prostatitis patient consult

it is relate to the prostate special structure, the prostate envelope is fatty envelope. Not only medicine aqueous solution but also medicine fat solution is difficult to permeate into prostate. (2) The bacteria corrode the cell of prostate everyday, it produce much toxin and the toxin is difficult to drain out. Such as you have a running sore, if you didn't drain out the pus , even if you inject much antibiotic ,you are difficult to recover too. But if you drain out all the pus, then spread on a little tincture of iodine, the running sore will discover soon. In the routine treatment, there are not the draining out pus function, this is one cause of prostatitis difficult to cure. In my green therapy, the plaster can draw out the prostate pus from accupoint. (3) The medicine consistency can't maintain stable. After you eating or injecting medicine, it only can maintain high consistency in blood for one hour, only little medicine can permeate into prostate, so the bacteria invariably have enough time to breathing spell, so they will not be killed totally. The bacteria will propagate large quantities soon. (4) The antibiotic is easy to be adapted by bacteria, and the antibiotic kill the valuable bacteria which in human body, so it will make bacteria community imbalance, it will easy to make duality infection. Antibiotic is imposible to cure chronic prostatitis. The antibiotic or too deficiency of vital energy and lowering of body resistance chinese medicine have great sideeffect, and they will lead to the constitution becoming bad. If the vital energy became bad, the unhealthy enviromental influences that cause disease will be brisk, so the prostatitis will be more difficult to recover. (5) The prostatitis patients are difficult to stop eating the unfavourable foods. In the treatment , to stop eating unfaverable foods requirement is strict, because chinese medicine and foods' nature are similar. If you go to restaurant or noshery to eat , the foods usually be put garlic or ginger inside. In Mcdonald and Kuntucky, there are many backon meat or deep fried potatoes, they are all hot foods, the patients is difficult to avoid eating them, so it is hard to cure. (6) The bacteria corrode the prostate cell every day, so it will make the prostate's texture changed greatly, such as it change into bigger, sclerosis, hyperplasia, calcication, etc. So it will make the prostate blood circulation appear some dead space, the micro-blood circulation is very feeble, so the medicine is more difficult to permeate into it. It is a Garden of Eden for bacteria. Such as the dirty water in the sewer, even though you pour a basin antibiotic into the sewer, still can't kill all the bacteria in the sewer, and it will change back to stink sewer soon. But if you build a brook here , change it into running water , all the bacteria will be washed away, there are no room for the bacteria to hide anymore. So the ditch will not be stink. In the prostatitis treatment, the bacteria will not be killed totally until the prostate texture and micro-blood circulation be repaired to good condition. The traditional treatment can't do that, you have to cooperate practising QiGong to repair the prostate texture and micro-blood circulation. I can sure you can recover by my green therapy. If you want to cure prostatitis , you have to solve the above problem. And my green therapy can directe against the above problem to solve.

4. Can the prostatitis patients sex?

The prostatitis patients can sex moderately, such as once or twice in a week moderate sex can help the inflammation secretion and pus drain out. But you can't sex excessively. If you sex excessively (such as sex once for one day), it will cause hyperaemia excessively and consume the essence of life. So it is disadvantage for prostatitis patients to recover. If you are prostatitis with bacteria infection, you have to use condom to avoid to infect others. After sex, use warm water wash away all sperm, avoid the sperm become the bacteria culture medium. If you infect the other, when you will recover, the other will infect you again. So infect each other again and again, you can't recover forever.

5. What merge symptoms do prostatitis patients have?

The prostatitis with bacteria infection must accompany all the urinary organs infection. Such as urethra, bladder, testis, prostate, epididymis vesicle, groin lymph all will be infected. Because all the urinary system are linked. But the symptoms are laid particular emphasis on different infection part, it depends on different patients condition. Perhaps some parts have no symptom and some parts symptom is obvious, but it is seldom rise to infect kidney, some bacteria (such as streptococcus and tubercle bacillus) is easy to infect kidney. If you get pyelonephritis, it will be more trouble, so you ought to cure actively, prevent infecting kidney. The prostatitis patients usually symptom is urethra itch and ache, underbelly bloated and pain (cystitis), testis oedema and abdominal distention, epididymis pain, perineum expend and pain, penis root itch (varicosity infection), lumbago (it can cause by cystitis or by prolonged illness makes weak kidney's lumbago), groin uncomfortable (lymph lie in groin, it is the immunity system that engulf bacteria, but if it can't win, it will become inflamed too), prolonged illness will cause sexual function and desire be much weakened or disappear, blood sperm, impotence, premature ejaculation and barrenness, etc. Vigour symptoms are low spirits, dizzy, tired out, etc.

6. Can different kinds of bacteria infection prostatitis all be cured by Chinese herb medicine?

The prostatitis can be infected by bacteria (such as bacilli, staphylococcus, gonococcus, streptococcus, mould, colon bacillomonad, etc), fungus (such as genital candidiasis), chlamydia, Mycoplasma, trichomonad etc pathogen. Chinese herb medicine anti all bacteria and the prescription can antipyretic and reduce eczema, drain the pus out, diuresis, invigorate the circulation of blood and get rid of stasis, kill bacteria and recuperate prostate. The prescription is aimed at prostatitis damp and hot sink, the function of vital energy and the state of blood are retarded by silt and kidney's vital energy loss. It kills bacteria but it isn't weak, without side effect. The

prostatitis patient consult

prescription not only aim at all the urinary organs infection , but also stress on prostate, such prescription is secret recipe. Such as there are some book introduction prescription used safflower to invigorate the circulation of blood, safflower is very hot, if prostatitis patients drink it ,it will be more serious. If the prescription medicine is much deficiency of vital energy and lowering of body resistance, the patients only can hold out several times for taking medicine, but if they took longer, it will exhaust their vital energy and lower of of body resistance. If the constitution be bad, the disease is more difficult to recover. If you taking the chinese medicine prescription of killing bacteria had made the symptom very slight, you can change to take the chinese medicine prescription of recuperating prostate. The bacteria infection prostatitis pathogenesis and symptom are similar, they all have eczema, febrile symptom, silt up and weak character. So you not only need to see killing bacteria , but also need to be aimed at the symptom to organize the prescription, recuperate the main and collateral channels, the negative the positive. The ointment, the bath medicine and propolis capsule can kill bacteria too. Depend by my experience, the bacteria infection is the most suitable, the chlamydia and Mycoplasma are a kinds of microorganism that smaller than bacteria. They are easier to suit antibiotic and they have great vitality, so they have to be cured by chinese medicine. The treatment of fungus and trichomonad infection prescription have a liittle different. If you want to enhance the killing bacteria ability, you can eat many purslane. The chinese medicine prescription would not be suited by bacteria, but the single chinese medicine perhaps will be suited by bacteria after long period taking, because all the organism can be siuted each other.

If your orchitis is serious , you can inject the accupoint that lie at the two side of pubes by Herba Andrographitis or Herb Houttuyniae injection liquid for several times appropriately. Because the testis is handed out side your body, the eating medicine is difficult to reach them. if the medicine density can't reach high, it will be difficult to ease the inflamation. Inject the accupoint can make the medicine density reach hingh around the testis quickly. When the inflammation ease, then drink the chinese medicine to consolidate. The chinese medicine hospital accupuncture and moxibustion doctor can inject and I can inject too. if you urethritis symptom is serious (such as urethra red and swelling),you can use 3 spoon vinegar mix a cup of cool boiled water, put your penis into the cup to dip in for a few minute, so it can kill bacteria in your urethra at once, because all the bacteria can't live in acidity liquid.

7. How will prostatitis influence eugenesis?

If the prostatitis can't be cure for long time, only some patients will lead to be unable to have children, still no report said that it will cause foetus malformation. If you have prostatitis with bacteria infection, it must accompany all the urinary organs infection, the bacteria erode your testis everyday, influent the

prostatitis patient consult

sperms producing and its quality. So the jism will change into very thin, if the sperms quantity amount can't reach enough high for pregnant, so it will be difficult for wife pregnant. Because only the best sperm swim fast to meet the germ cell, so the sperm quality is not bad, so it hardly cause the new born baby's malformation. The bacteria etch your prostate everyday, it will make it's texture change greatly. So it will influent the prostate liquid producing and it can't nurish sperm, and it will influence pregnant too. The prostatitis without bacteria infection influence pregnancy too, but it is less than the influence of prostatitis with bacteria infection. If you have the infection, you are easy to infect your wife, if your wife have been infection, your wife have to take medicine in the pregnant, so it will influence embryo greatly. So I suggest you to bear children after you recovered. If your symptom is not serious, and the bacteria can't reach enough, it will not infect your wife, because the female vagina is acidity, acid can kill bacteria, it is not easy to be infected.

8. Why the stop eating food requirement is so strict in the prostatitis treatment?

In the chinese medicine treatment, the medicine and food belong to the same category. The prostatitis are very sensitive to hot food (Such as litchi, dog, pumpkin, etc), incentive food (such as ginger, garlic, wine, etc), cause swelling food (such as mushroom), cause sliting food (such as Colla Corri and pork-foot), stinking food (such as shrimp, crab, fish, mutton, etc). The prostatitis will be sevious at once after eating the above kinds of food. If you are cured by chinese medicine, you take the herb medicine of reducing internal heat and dampness, eliminating pus and killing bacteria, invigorating the circulation of blood and diiolving slit, but you take the unsuit the proatatitis recover food at the same time, this is tantamount to take the medicine in vain.

Eating the ginger or garlic once tantamount to take medicine for five days in vain. Eating seafood once tantamount to take medicine for ten days in vain. Eating dog once tantamount to take medicine for 15 days in vain. The hot foods will make the bacteria propagate quickly, the hot foods' biological eletromagnetic wave conform to the bacteria's eletromagnetic wave. The stinking food will make the prostate more difficult to dredge and permeate. The causing slit foods will make the prostate more sliting. The causing swell food will make the prostate swell. The protein will change it's properties in high tempreture (above 200 celsius degree), it will change into hot food after burnt. Such as the burnt meat is very hot, (If the meat was boiled by water, the tempreture isn't exceed 100 celsius degree, it won't be hot food.) so the roast meat and the micro-wave oven processing food is hot, (The micro-wave oven processing temperature is above 100 celsius degree.) You can't eat them. Such as the boiling peanut isn't hot, but stir-fried peanut is hot. The normal stir-fried meat and vegetable with oil isn't hot, you can eat them. The irritant

prostatitis patient consult

food contain the hot composition and the hinder the prostate dredging composition. The stop eating foods requirement are listed on my cure method No.7 point, please browse it for detail. If you incaution eat a little hot food, you had better eat some cold food to release the hot effectiveness at once, such as eat watermelon, pear, white radish etc, they can neutralize a little the hot food.

9. What tonic or nourishing foods should the prostatitis patients take to build up their health?

Prostatitis patients suffer from general debility after prolonged illness. Weak kidney energy can't nourish cerebrum, so the patient will be dizzy, the memory is falling, tired, impotence, even the hair turn white or trichomadesis.

The prostatitis patients can't take vulcanize chinese medicine as tonic, only can take moderate tonic and light tonic. The royal jelly is the best suit food to build up prostatitis patients health., build up patients resistance to disease. The prostatitis patients can use Beiqi, Duzhong, Lianmi, Yimi, Cishi, Heidou, Shouwu, Shanshen, Yuzhu, Huaishan, Goujizi, Dangshen, Xiyangshen, etc light tonic to stew chicken, duck, pork, pigeon, etc to nourish. You can take more grape, pear, watermelon, sugarcane, radish, wax gourd, towel gourd, etc cool melon and fruit in the normal time.

10. Are there any good treatment methods for An Enlarged Prostate (BPH) and prostate hyperplasia ?

The bacteria corrode the prostate everyday, prolonged illness will cause the prostate hyperplasia, bigger, sclerosis, even calcification, The old men Enlarged Prostate (BPH) is caused by the old age and the prostate function falling, sex hormone maladjustment, dampness and hot slit up to make the texture change, the prostate hasn't bacteria infection. some patients will cause calcification, it means that the texture is very hard in the calcification zone, and the blood circulation will change into putrescence in this zone, the toxin can't drain, the toxin will cause the prostate condition change and the cell aberrance, so some patients will develop to prostate cancer. So An Enlarged Prostate (BPH) had better use chinese medicine, physiotherapy (prostate rehabilitator), food therapy and practising QiGong, cooperate to cure. Take the chinese medicine to stimulate the prostate blood circulation, destroy the silt, diuresis. Applying the plaster make the medicine consistency maintain stable to effect the prostate, use prostate rehabilitator to improve the prostate micro-blood circulation. (Such as when your prostate pain, use the prostate rehabilitator only for 30 minutes, the pain will ease at once.) Practising QiGong to dredge the passages through which vital energy circulates, remove the ill energy, repair the prostate texture. Eating the bee product to recuperate, and provide the nutrition for prostate repair. My green therapy can remove the calcification and cure prostate cancer too.

prostatitis patient consult

The above are my experience and idiographic view in the prostatitis treatment, answer for the prostatitis patients consults excerption. If you need help and want to consult more, please send E-mail to me:
