Hi Mor,

Sure. The Ten Second EMR program runs on top of MS Word. So, ... you can export or import either direction. When the file is made with MS Word, simply "Save As" and select "Save As Type" and pick your choice.

Importing works somewhat similarly. If you're in a MS Word document, use File/ Open/ but be sure to click on "Files of Type" and expand to "all file types" to show all file types in the open box so that files other than just MS Word will show up. Then txt and RTF file types show up too.

:)
