Ever since getting set up on this new computer WP 12 is acting really strange. It came bundled with it, but I'm probably going to have to uninstall and reinstall, because the dictionaries, OEM and the ones I've installed, are acting very, very strange. It flags correct words, but if I stop typing, use the up arrow key to go up one line, it unflags its bad flags and everything's normal until it starts flagging me a few words later. So the dictionaries are definitely corrupt. And Corel Support refuses to help me for free (their ideas on their forum did not work) because it was bundled with the Dell and not bought off the shelf....how crappy, I still paid for the dang thing.
