Hi Chris!! I'll have to check my Olympus software but I believe there is a way to have everything from different folders all moved to one either when the program is going through it's downloading process from the device or, well, I cannot remember when. I had a doc who had plopped files into a gazillion different folders and while it kept taking them off his recorder and putting them on his computer but he didn't know it and didn't upload them. Well, 700-something files at once later we figured out how to remedy that. Let me see where I put that information.

What Olympus recorders do you use?

Jeannie

Okay, I think this is how we did it – I don't have any recorders handy to try it out but it may help you.

Open the DSS Player program
Tools
Options

Look down for download folder and then there is a box to the right. Click on that box and you will have the option to make them all go to one folder or all automatically download to whatever folder you specify by going to that location and creating it.

I hope that makes some sense for you!

Jeannie
