Translation: Hospitals are places where very vulnerable people go where they can be easily scammed out of their money by the medical profession.

Do you hear that sucking noise, Steve, every time you make your hospital rounds? Oh, ... that is right! I also most forgot that your bedside manner was so bad, that you no longer are allowed to treat patients.

Ha, ... Hah, Ha!

The key point here is that Steve is openly admitting to mistakes being routinely made by the medical profession, which is precisely my point.

Covering up deaths by treatment mistakes, error, etc. happens to be just as big a fraud as all these CAM scams that you geeks are constantly whinning about.

Every death caused by a medical mistake should be reported as such. The people responsible should be sued for every penny that they got and drummed out of the health care business. Only then would medicine be able to claim that its practices are scientific.

At the moment, medicine is only another scam used to take advantage of very vulnerable people. So, all this whinning about CAM is a ploy designed to divert attention from the real issues of medical frauds being routinely committed.

Shame on you, Steve, for supporting such fraudulent practices.
